

CPSC 250L Lab 1

File/Directory Structure and Git Intro

Name: _____ Section: _____

January 3, 2020

1 Introduction

The focus of this lab is to solidify your understanding of file/directory structure, and introduce you to navigating via the command line interface (CLI) using GitBash.

Follow the directions on the GitLab project webpage, and answer the questions below.

2 Questions

Answer or initial that you completed as directed.

1. Part 1 - File/Directory Structure, and Git Bash

- (a) _____ Initial when you have opened the Windows File Explorer GUI and navigated to the Documents folder.
- (b) _____ Initial when you have navigated to the top level folder in File Explorer.
- (c) _____ Initial when you have navigated back to the Documents folder in File Explorer.

© Christopher Newport University, 2020

- (d) ____ Initial when you have opened the GitBash Command Line Interface.
- (e) ____ Initial when you have changed to the Desktop directory in GitBash.
- (f) What is another name for a CLI? _____
- (g) ____ Initial when you have listed files using `ls`.
- (h) ____ Initial when you have listed files using `ls -altr`.
- (i) What is the full path of the Desktop directory?

- (j) ____ Initial when you have navigated to the root directory in GitBash.
- (k) ____ Initial when you have navigated back to the Desktop directory going step by step.
- (l) What is the command used to back up one directory from the current directory?

- (m) What is the full path of the current directory after backing up one from the Desktop directory?

- (n) What is the command used to create a new directory in a bash shell?

- (o) What is the command used to display the current directory?

- (p) What is the command used to go to a user's home directory (denoted with `~`) ?

- (q) ____ Initial when you have created the `cpssc250L` folder on your Desktop using GitBash.
- (r) What is the shortcut that enables us to avoid typing out the full “cd Desktop” (or any other file or directory name) every time?

2. Part 2 - Git Project

- (a) ____ Initial when you have set your ‘WCUSER‘ and ‘WCPASS‘ variables for WebCAT on personal GitLab **group**.
- (b) ____ Initial when you have forked **cpsec250l-lab01** project repo to your **personal** group.
- (c) ____ Initial when you have set your Git credentials.
- (d) ____ when you have cloned **cpsec250l-lab01** project repo into your **cpsec250L** directory AND verified its contents using **ls**.
- (e) What is the full path of the repo directory that you just cloned?

- (f) ____ Initial when you have the project open in PyCharm.
- (g) ____ Initial when you set the working directory in PyCharm.
- (h) ____ Initial when you make the first *push* to GitLab.
- (i) ____ Initial when Exercise 1 is complete and pushed
- (j) ____ Initial when Exercise 2 is complete and pushed
- (k) ____ Initial when you have verified correct on WebCAT!

If all is initialed and filled out, and correct on WebCAT, then show your instructor and hand in this form.

You are then free to leave; have a great remainder of the day. Of course your day should include some additional coding practice!

This lab is worth 100 points:

- 35 points completing this worksheet
- 35 points WebCAT solution (correctness)
- 30 points lab participation (completing during lab or significant progress)
- ____ **Instructor** initial to verify full participation during lab period

Note: Your WebCAT score will only show 35 of 100 until your instructor enters the participation score under "Design/Readability" in WebCAT. Your goal should be 35/35 correctness score on WebCAT (log in and check!), and the instructor initial above to indicate worksheet complete during lab.
